

TECHNICAL SHEET

YOUR BEST ALLY AS AN AID IN THE CONTROL OF DIGITAL DERMATITIS

- Non-toxic & biodegradable footbath alternative to copper sulfate and formaldehyde
- An essential part of a complete hoof health management program
- THYMOX HOOF, the first and only footbath approved by Health Canada

KEY BENEFITS

EFFECTIVE

FIELD TESTED EFFICACY ON DIGITAL DERMATITIS

ANTIMICROBIAL EFFICACY ON SPECIFIC HOOF MICROBES

ECO-FRIENDLY

ACTIVE INGREDIENT FOUND IN PLANTS: THYMOL

READILY BIODEGRADABLE
14 days according to OECD 301E

COMPATIBLE WITH BIODIGESTORS

CONVENIENT

NON-IRRITANT

NON-TOXIC

NON-CORROSIVE

NO MIXING REQUIRED

AVAILABLE SIZES: 20, 60, 200 AND 1000 L

Dilution: 1:100 in water

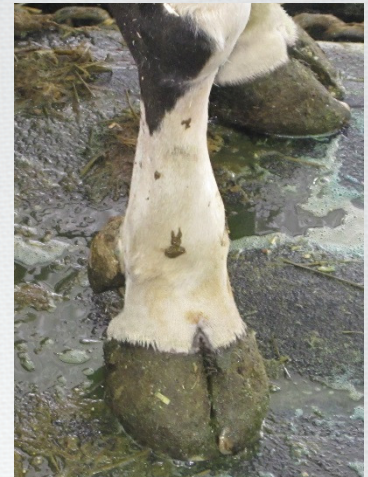

- ✓ **Footbath**
- ✓ **Spray**
- ✓ **Hoof-wash system**

DIN 02453479

TECHNICAL SHEET

FOOTBATHS USE, A KEY ELEMENT IN DIGITAL DERMATITIS MANAGEMENT

- Effective hoof disinfection via footbaths helps to limit the spread of infections in the herd
- The use of non-irritant footbath solutions promotes healthy hooves

DIGITAL DERMATITIS

The most problematic hoof infection, digital dermatitis (DD) causes major economic losses. The disease can cycle back and forth from active lesions to chronic hidden lesions. Chronic DD lesions are often ignored,

and these lesions are ticking time bombs that can revert to painful warts. THYMOX HOOF is designed to help control DD lesions and break the vicious cycle.

"Before, I was using formaldehyde footbaths to control hoof health but always felt uncomfortable to work with such a harsh chemical, knowing the risks linked to it.

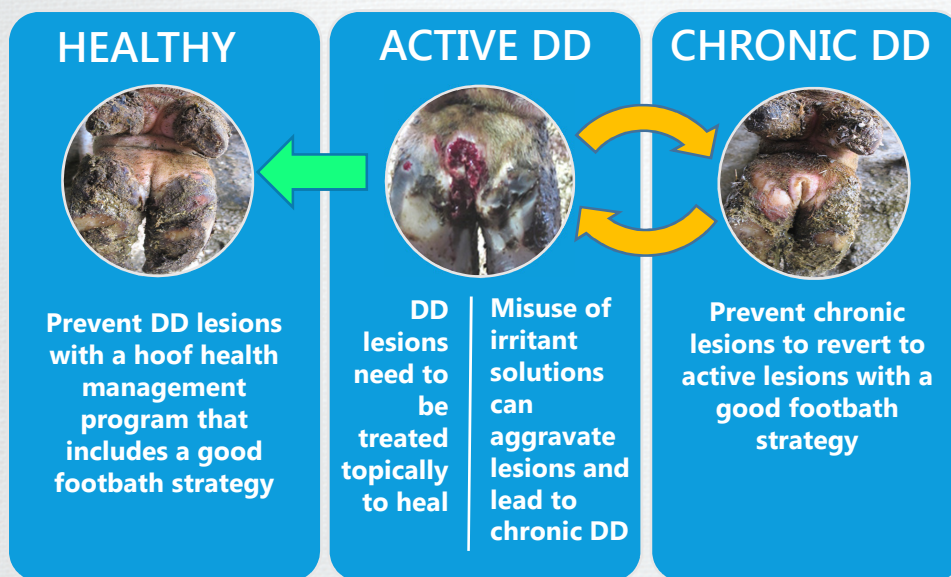

I tried using THYMOX HOOF and noticed that the herd hoof health was comparable to what I was previously observing with formaldehyde.

I was impressed with knowing that THYMOX HOOF was safe, biodegradable and non-toxic, so it was easy to use THYMOX HOOF as my regular footbath solution.

Since I am using THYMOX HOOF, the lameness prevalence decreased to approximately 5% and I am confident that it can continue to decrease."
