## A unique formula for faster results... without antibiotics!

*Thymox Hoof Defender is **free from antibiotic and harsh chemical**. It contains no tetracycline and no copper sulfate which typically requires precautions for mixing.*

*Thymox Hoof Defender is **easy to use on cows' painful warts**, often called strawberry lesions. It is ready to apply in a trimming chute, in the milking parlor or anytime you have access to an active lesion. It is specially formulated as a tacky gel that strongly sticks to hooves.*

**No need for a hoof wrap.**

*Thymox Hoof Defender is formulated with specifically chosen **biodegradable, plant based ingredients**. It contains **thymol**, a component of the thyme plant that is well known for its powerful antiseptic, antibacterial, and antifungal actions.*

*Typical active lesion*

### How does it work?

Thymox Hoof Defender creates a **barrier**. It is water repellent and protects the active bloody lesions from contaminants such as **dirt and contagious microorganisms** that worsen the infection.

With just a few applications of Thymox Hoof Defender, you will see a **quick, natural healing process** of the affected area.

## **Quick natural healing, healthy hooves**

# Quick, natural healing

## Idaho field test

A field trial was conducted in Jerome, ID in Dec. 2017.

Thymox Hoof Defender's wound dressing efficacy was scientifically addressed.

All the cows presenting active, bloody lesions were enrolled in the study.

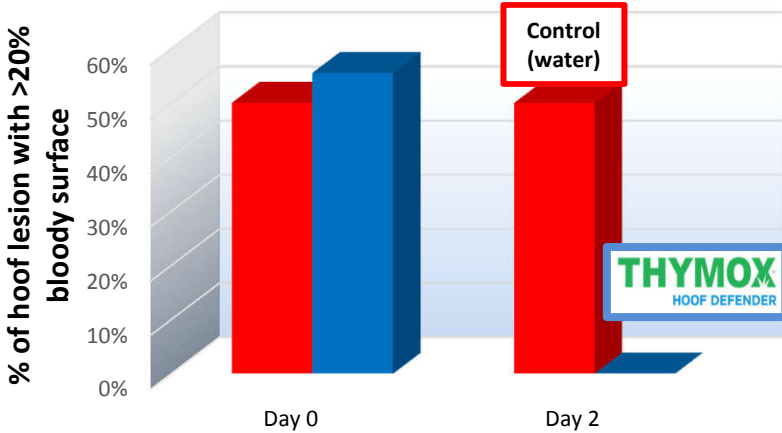

Thymox Hoof Defender was easily applied daily in the milking parlor for three days. Control cows were treated with water.

Lesions were scored by an independent veterinarian.

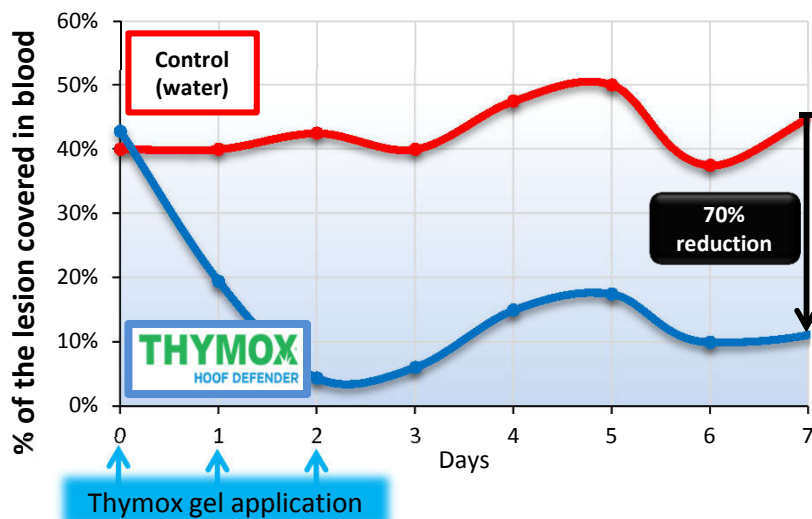

*Test farm milking parlor  
Jerome, Idaho*

## Faster Results

## Long Lasting Effect

*Painful bloody lesion  
Before Thymox application*

*Easy gel application*

*Quick results  
2 days after application*
